Here is a simplified example of my data set: I want to have a Conditional Format to highlight the red, if A2 contains "001" When I try a formula as below, it returns the error "Cannot insert conditional formatting formula because the cell is out of bounds I have tried a few different versions of the IF statement (e.g. =IF(A2="001",A2="0"), =IF(A2="001",A2="1"),) and none of them are working. A: That's because you're missing an AND: =AND(A2="001",A2="0") That says, only if A2 is both 0 and 1, then check for A2="001". Promotion of iron uptake and transferrin receptor expression in cells of the monocytic lineage by a family of homologous molecules: CD163 and CD91. Human monocytes, one of the main producers of transferrin receptor (TfR) and a key component in the clearance of aged erythrocytes and apoptotic cells, also express and secrete the scavenger receptors CD163, CD81 and CD91, of which CD163 is the most homologous with the TfR. By comparing the expression levels of TfR and CD163 in a series of cell lines representative of the monocytic lineage, we have demonstrated that both receptors are coordinately expressed. CD163 and CD91, but not CD81

Edit more efficiently in Multilevel: Start editing on the second level with Multilevel: the new environment that enables you to work on more than one view. Reorder and collapse views and put these on top of the other views. Set options, such as grid and layer visibility, on any view. (video: 1:27 min.) Work with images more efficiently: With the new Image Data tool in Multi-view, you can edit features based on the properties of the image in a new image tab. Insert, move, and copy image layers, and easily remove unwanted image layers. You can work with images in a drawing in a completely new tab. (video: 1:19 min.) Display features more efficiently: Now, you can automatically display hidden or obscured features for easier editing. (video: 1:16 min.) Get better editing results: In AutoCAD, the shape and area tool tip displays information that helps you edit more effectively. The new AutoCAD Info help window, which is part of the Windows Help and Support Center, also provides additional information to help you work with and organize drawing files. (video: 1:34 min.) Easily edit with enhanced Drawing Editor: The new Quick Find tool can find symbol instances quickly and easily. Find files quickly and easily and use the updated Windows Search. (video: 1:24 min.) Visualize your work more easily: In addition to the standard and enhanced drawing window, you can now create extra, floating windows. On the Windows task bar, place the window where you need it and customize it to display the specific information you need. (video: 1:41 min.) Make 3D and X-Y drawing more dynamic and efficient: Save drawing time with the new Power Modeling tool and advanced surface tools. (video: 1:19 min.)
