Modify the dimensions of a line with the MOD command. (video: 1:18 min.)

Windows Vista Windows 7 1 GHz Processor (RAM) 2 GB available Hard Disk Space Tested the game on a Windows 7 PC with a 1 GHz processor and 2 GB of RAM. Since a PC with these specifications can probably play the game at highest settings at around 30 frames per second, we don't expect you to encounter any major performance issues. There are several graphics settings in the game, and it's recommended that you use the recommended settings for your machine. As mentioned before, the game has no restrictions regarding RAM, so we recommend
